

BATTERY SAFE

for electric trolleys, e-bikes,
drones, models etc.

Original and 100% safe!

Tested and certified JuCad Powerpacks in their original condition pose no danger whatsoever!

An increasing number of golf clubs now require fireproof boxes for charging lithium-ion batteries.

- ✓ Also suitable for batteries of other manufacturers and brands!
- ✓ Charging of batteries up to a charging capacity of 350 Wh
- ✓ Inner dimensions W x H x D: 250 x 165 x 100 mm

How it works:

- Batteries can be stored and charged inside the battery safe-box.
- The charging cable is routed through a flame-proof opening.
- In the event of a defective battery, the pressure generated inside is vented and any smoke is filtered through the upper ventilation bore holes ensuring no harmful substances are released to the atmosphere.
- Our super-light JuCad battery safe-box will meet the requirements of many golf clubs, thus allowing you to continue charging on site.
- The battery safe-box can naturally also be used for charging lithium batteries at home or on holiday ensuring additional safety.
